LORAIN COUNTY **GENERAL HEALTH DISTRICT**

2016 ANNUAL REPORT

BOARD OF HEALTH MEMBERS

Patricia Schrull, PhD, MEd, MSN, RN President

A MESSAGE FROM

The Lorain County General Health District

(LCGHD) works hard every day to protect

residents from public health hazards so that

people in Lorain County can live healthy and

In 2016, some of our priorities included:

preparing parents and children for new

immunization requirements, partnering to

educate residents about the Zika virus, and

helping to make healthy foods more available

to everyone regardless of income or access.

Also in 2016 we achieved national public

health accreditation, which ensures we're

always improving as a health department.

As I write this note in early 2017, we just

to live, work and play.

Community leaders also voted to unify the

public health departments in Lorain County.

began to serve all of Lorain County. Together,

we will make Lorain County a healthier place

THE HEALTH COMMISSIONER

David Covell, RS, MPH

safe.

WHEN LIFE HAPPENS... VER RESPOND

Protecting the community

This summer, while world leaders discussed how to control the Zika virus, Avon Mayor Bryan Jensen strategized how to protect his residents. Even though the Zika virus did not pose an immediate local threat, Mayor Jensen knew that other mosquito-borne diseases could harm his residents. He reached out to the health district and asked for assistance to inform Avon residents about staying protected from mosquitoes.

The health district responded by producing an easy-to-read fact sheet on ways to stay protected from mosquitoes, including facts about West Nile and Zika virus. Avon leaders and the health district decided to spread the word by mailing the fact sheet with all Avon residents' utility bills.

As with every mosquito season, the health district's mosquito control team worked to keep track of mosquito activity. Throughout the summer, they controlled the mosquito population by treating breeding sites, reducing adult mosquito populations, testing for disease, and educating property owners to keep all Lorain County residents safe from disease.

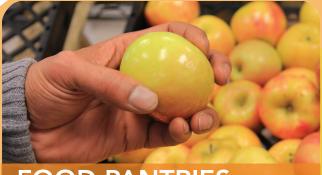

Informing parents & protecting teens

To keep students healthy, a new vaccination requirement was issued under Ohio law to begin during the 2016-2017 school year. Now, all students entering grades 7 and 12 need a meningococcal vaccine to protect against meningitis. LCGHD's vaccine team knew the new law would affect families as they got ready for the school year. Back-to-school preparation is hectic enough, and while this vaccine would protect teens from a deadly disease, the requirement also added to parents' to-do lists.

In response, health district nurses held special meningitis vaccination clinics throughout the summer so parents could easily get their teens protected. The clinics also gave students and their parents a chance to ask public health nurses about how vaccines protect them, and to receive other health screenings.

Additionally, the LCGHD team worked with media and school administrators to alert parents of the change in the state law so there would be no unpleasant surprises when school started. Immunizations and vaccine education are available year-round to keep the whole family protected.

FOOD PANTRIES:

Creating opportunities for health

Director of Oberlin Community Services (OCS), Cynthia H. Andrews, strives to bridge the gap between hunger and health, both at OCS's food pantry and by assisting other community pantries. "Many pantries give pre-filled bags of food to clients," she explains. "While this helps to eliminate hunger, some sugary and processed foods given can jeopardize health, especially for clients with prediabetes or diabetes. If clients can't eat their food, they're forced to just throw it away."

In 2013, OCS found a way to help clients eat healthier while still meeting their needs. The pantry learned from LCGHD health educators that when pantry clients choose their groceries, they feel empowered to pick foods that are better for their health—a *choice* pantry.

After the health district helped OCS switch to the choice pantry model, Cindy saw the benefits of giving clients more choices. In fact, in 2016 OCS began holding pantry tours to educate other community pantries interested in switching. After the health district's success with OCS's choice pantry, three other local pantries asked for assistance to switch to this sustainable model.
